## Introduction

---

# Tokenomics

**Max Supply: 10,000,000 SHIMEKA**

**Max Wallet: 3%**

**Max Transaction: 1%**

**Taxes: 5%/5% (for Marketing/Development)**

**Contract Address: 0xa883a9dbdea417c8a05b2c9963792c2038e1d841**

**Contract was verified and renounced shortly after launch.**

---

Shimeka Inu Token is a decentralized meme token on the Ethereum blockchain. The name SHIMEKA is a spin-off from the popular Shiba Inu token (SHIB) and Shina Inu Token (SHI), imagined as the youngest offspring of the two. The name Shimeka symbolizes youth, energy, and innovation. As a cryptocurrency, it aims to encompass the world of memes and sustainability through unique integrations, both third-party and internal. A 'Rewards Hero' in the world of digital assets provides a flow of cash independent from relying on another to enter as a growth factor (the greater fool phenomenon). Shimeka Inu Token leverages the latest advancements in blockchain technology to create a new paradigm of decentralized ownership, where everyone can participate and benefit from the growth of the network. Shimeka is self-reliant, our overarching goal is to create a fully autonomous meme enabling frictionless participation in a diverse ecosystem.

## Introduction cont.

---

Meme tokens have arguably become some of the most impactful projects on the Ethereum blockchain, driving significant growth and interest in the ecosystem. Adopting a meme token like Shiba Inu or Floki can be compared to adopting a furry friend of your own. Just like a pet dog, owning a meme token brings joy and a sense of responsibility to its owner. Both require care and attention to thrive, and both have the potential to bring happiness and despair. The rise of meme tokens has further cemented the power of community and social media in shaping the cryptocurrency space. These tokens, born from internet culture and fueled by online communities, have demonstrated the immense potential for decentralized projects to gain widespread traction and impact. As the trend of meme tokens continues to evolve, it is clear that they will continue to play a major role in shaping the future of the cryptocurrency landscape. SHIMEKA is trying to create a new generation of autonomous meme tokens where your tokens have an intrinsic worth that's backed by the value generated by the ecosystem.

## Rewards Generation

---

Shimeka Inu Token is designed to be a multi-reward token, allowing its holders to earn yields generated by the ecosystem. Participation in these rewards will be centered around staking. Profits generated from the ecosystem will flow directly to stakers. Therefore, owning SHIMEKA is akin to owning the cash flow of the Shimeka Inu Ecosystem. Revenue streams we are currently working on include (but are not limited to) Trading Bots & a Lending/Borrowing Protocol on the Shibarium network.

## Trading Bots

---

Our first integration we've been working on securing is the deployment of the Hand of Midas Gold Trading Bot for our holders. Hand of Midas which provides its users with an AI-powered trading solution that leverages market data and historical analysis to maximize profits on forex trades. We intend to secure the usage of a Midas trading bot to kickstart staking and provide the first source of income for SHIMEKA holders. We plan to add more bots over time as we continue to diversify and bolster income streams for holders.

# SHILEND Protocol

---

On SHILEND, our Shibarium-based lending/borrowing platform, users will pay interest on the collateralized loans they take out. Lenders will receive a majority of the interest payments but a percentage of the borrowing fees will go directly to token stakers. This creates a sustainable stream of liquidity for the staking platform. As users take out loans and pay interest, the platform generates income that can then be distributed to stakers as rewards. The dynamic interest rate model as well as a new reward token will incentivize borrowers/lenders to utilize the protocol and drive liquidity to the platform.

Beyond trading bots & borrowing/lending platform, Shimeka Inu Token has plans to develop other revenue-generating modules and continuously drive cash flow to holders/stakers. This diversification ensures that the token is not dependent on any single revenue source, providing its holders with a balanced portfolio of income streams. This will continue to be updated as plans are further developed and more partnerships are secured.

## Conclusion

---

Shimeka Inu Token is a decentralized meme token that leverages the latest advancements in blockchain technology to provide its holders with diverse streams of rewards. With its unique vision, growing community, and plans for further diversification, Shimeka Inu Token is positioned to become a player in the world of Shibarium. Join the Shimeka Inu Token community today and be a part of a new paradigm of meme token sustainability.

As individual entities, our capabilities to bring forth our aspirations may be limited. Just as a pack of inus can take down their prey with strength in numbers, we too can achieve greater success through unity and collaboration.

## Next Steps

---

- Community Building: Establish a strong and engaged community of Shimeka holders and advocates through regular communication, marketing, and community events.
- Update Dextools
- Update website
- Contract audit
- ShibaSwap liquidity pool
- Deploy first trading bot & open staking pool: Staking will include a lockup period so that rewards will be concentrated toward long-term holders.
- Secure partnerships & integrations: Seek out and secure strategic partnerships with relevant stakeholders in the crypto industry, including exchanges, wallets, and DeFi protocols in the Shibarium ecosystem.
- Release a detailed roadmap
- Launch Shibarium token
- Launch lending/borrowing protocol on Shibarium

The launch strategy for Shibarium will be announced on Telegram to avoid user manipulation and gamification measurements.
